

egolife DAY1_A2_ALICE_17130000

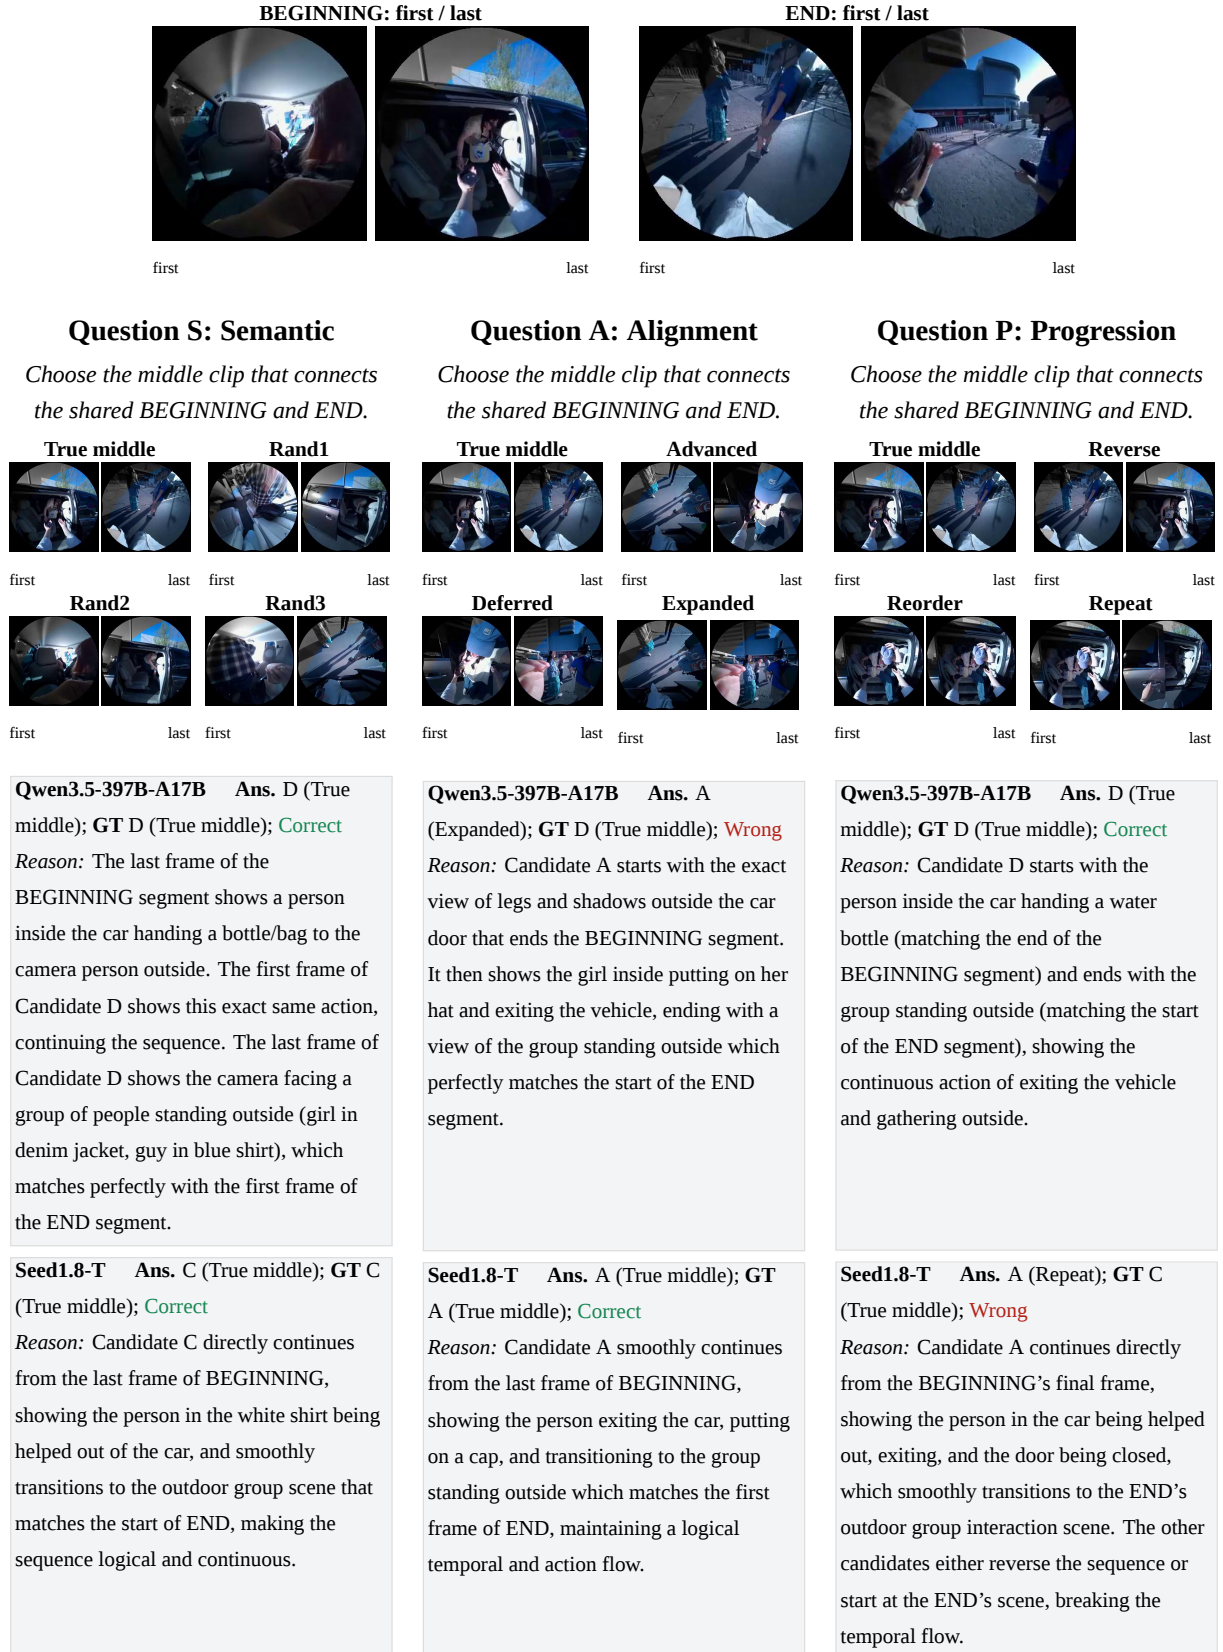

Figure 1: Qualitative case study on egolife sample DAY1_A2_ALICE_17130000. Each subtask shows the shared context, candidate middle clips, model answers, and model reasons.

lvd HwAPGFLvoHg.60_0

BEGINNING: first / last  first last		END: first / last  first last			
Question S: Semantic <i>Choose the middle clip that connects the shared BEGINNING and END.</i> True middle  first last Rand1  first last Rand2  first last Rand3  first last	Question A: Alignment <i>Choose the middle clip that connects the shared BEGINNING and END.</i> True middle  first last Advanced  first last Deferred  first last Expanded  first last	Question P: Progression <i>Choose the middle clip that connects the shared BEGINNING and END.</i> True middle  first last Reverse  first last Reorder  first last Repeat  first last			
Qwen3.5-397B-A17B Ans. D (Rand2); GT B (True middle); Wrong <i>Reason:</i> Candidate D shows the knife being inserted into the pocket, which seamlessly continues the action from the BEGINNING segment where the knife is positioned at the pocket edge. It leads logically into the END segment where the knife is fully inserted and the person's hand is resting, before a pen is introduced.		Qwen3.5-397B-A17B Ans. A (True middle); GT A (True middle); Correct <i>Reason:</i> Candidate A shows the knife being fully inserted into the pocket and the hands smoothing the fabric, which seamlessly connects the beginning (inserting the knife) to the end (knife in pocket, hand resting).		Qwen3.5-397B-A17B Ans. B (True middle); GT B (True middle); Correct <i>Reason:</i> The beginning segment shows the knife being inserted into the pocket. Candidate B starts with the hands adjusting the knife in the pocket, which naturally follows the insertion. It ends with the hands smoothing the fabric and the right hand resting on the pants. This matches perfectly with the start of the end segment, where the right hand is resting on the pants before a pen is introduced.	
Seed1.8-T Ans. A (True middle); GT A (True middle); Correct <i>Reason:</i> Candidate A smoothly transitions from the end of the BEGINNING sequence, where the hands are inserting the black tool into the pocket, to the start of the END sequence, where the tool is partially tucked into the pocket, matching the action flow perfectly.		Seed1.8-T Ans. C (True middle); GT C (True middle); Correct <i>Reason:</i> Candidate C shows a smooth transition from the BEGINNING's action of inserting the black tool into the pocket, adjusting it to the partially visible position that matches the first frame of the END, creating a continuous sequence of actions.		Seed1.8-T Ans. A (True middle); GT A (True middle); Correct <i>Reason:</i> Candidate A continues the action from the beginning, showing the hands pushing the black object fully into the pocket, which directly leads to the first frame of the END where the object is partially in the pocket with a hand resting on it. The sequence of actions is logically and visually consistent.
